FEATURES

- Microcontroller (MCU).
- Winter mode: allows charging and maintaining batteries at low temperatures.
- 12V STD mode.
- 12V AGM mode.
- 12V maintainer mode.
- Recond mode.
- Supply function.
- Safety protection (short circuit, overload, low voltage, over discharge, heat, overcharge, reverse connection, high voltage...).
- Fast/slow charging.
- Suitable for all types of lead-acid batteries, AGM batteries and gel batteries.

POWX4207 SMART BATTERY CHARGER

The Powerplus POWX4207 is a smart battery charger for car, motorcycle, boat, lawnmower and mobile home batteries. This trickle charger is suitable for 12V Gel, AGM and lead-acid batteries with a capacity between 3 and 200Ah.

Its intelligent micro controller unit provides a safe and ideal charging speed throughout. Just before the maximum capacity is reached, the charger will switch to a lower current to protect the battery while reaching a full charge.

The powerful smart charger is ideally suited for maintaining and charging batteries that have been standing still for a long time. The pulse charging method prevents the battery from getting discharged too deeply and therefore getting damaged.

It has an adaptable charging speed and can charge slow as well as fast. The recond mode reconditions the battery's health, meaning it restores the battery's full capacity and standard electrolyte level. Thanks to its winter mode, the Powerplus charger can also be used in low temperatures.

The lcd display shows the chosen mode and the current battery percentage clearly. The charger is easy to use and is equipped with a 150cm long power cable. It is also dust and waterproof, as well as protected against short circuit, overload, low voltage, over discharge and overheating.
