POWX4255

JUMP STARTER 3-IN-1

With this compact and portable 3-in-1 jump starter, a power supply (of about 12000mAh) is always within reach. Use the pair of 150mm jumper cables with battery clamps, and the 12V output to revive cars and motorcycles experiencing battery trouble. Additionally, the jump starter is also perfect for charging your tablet, smartphone, flashlights, and more, using the USB 2.0 and 3.0 outputs. Because the USB 3.0 output has a higher voltage (9V), your smartphone or tablet will charge even faster.

The 12V output is equipped with an over-charge protection so you can work without risk. If you happen to connect the clamps on the wrong side, you're still protected as the jump starter recognizes reverse polarity. On top of that, the device is equipped with protective features against several situations, including short circuiting, over-current, over-discharge, over-voltage and overheating. The charging station can withstand temperatures of -20°C up to 60°C.

In addition, this POWX4255 is fitted with a 15V connection that can serve as a power source for small devices like a mini-fridge or fan. So, it is definitely useful to have while on the road or camping.

Lastly, it also features an LED light which provides about 4 hours of light before it automatically shuts off to preserve power. You can have up to 40 hours of light with a fully charged battery.

The internal battery can be charged using the USB-C input. An LED light will indicate when the battery has been fully charged. The jump starter also comes with a USB to USB-C cable and a USB-C to USB-C cable.
