HIGH PRESSURE CLEANER
HOGEDRUKREINIGER
NETTOYEUR HAUTE PRESSION
HOCHDRUCKREINIGER
HIDROLIMPIADORA**

This gasoline pressure washer from Powerplus can be used anywhere, because it doesn't need a power outlet.

The powerful device with 208cc motor delivers no less than 225 bar and has a water flow rate of 540 litres/hour. It removes even the most stubborn dirt and can handle any cleaning task around the house and garden. Its eco driver turbo engine makes it a very highly performant pressure cleaner with a low fuel consumption and low vibrations. The easy start enables the motor's start in any condition.

The POWXG9009 has a self-priming function which allows the use of alternative water sources such as rainwater butts. When you want to work with detergent, you can choose the 2 litre detergent tank or use the extra tube for separate soap supply. The temperature relief valve will prevent an overheated engine and secures a safe use.

Thanks to the bypass system, the pressure washer is a safe to use cleaning tool. When the pressure washer's trigger is released, the water will be sent through a separate bypass circuit. There it gets pumped around at a constant pressure of 10 bar. This prevents the pressure washer's pump head from bursting because of overpressure and the motor from cutting out each time the trigger is released.

The high pressure cleaner with sturdy frame and steel lance comes with 4 spray nozzles, a soap nozzle, a detergent suction tube and a self-priming tube.
